

CERAMIC FUEL CELLS LIMITED

Creating the energy to succeed™

ASX / Media Release

5 November 2004

Australian energy company raises international profile

This week Australia's Ceramic Fuel Cells Ltd, (ASX- CFU) further enhanced its international position with progress on a number of fronts – AIM admission, trade delegations and presentations of its unique technology.

1. UK Advisors from Durlacher have been in Australia this week commencing their due diligence review of CFCL for the company's proposed admission to the Alternative Investment Market (AIM) on the London Stock Exchange.

Durlacher were appointed in October to assist with CFCL's application and admission to the AIM. The intent is to gain dual listing of CFCL's existing shares, enabling increased liquidity in trade through an expanded market.

2. CFCL delegates were specifically invited to a select briefing with the German trade delegation visiting Australia from the state of North Rhine Westphalia to discuss business partnerships. This follows discussions between CFCL and heads of government, industry and universities in NRW in Germany last year.

CFCL is considering a number of options for location of a fuel cell mass manufacturing plant in Europe and investment partnerships in development of this facility. CFCL is also working to form relationships with appliance manufacturers for the inclusion of its highly efficient natural gas fuel cell as an electricity and heat generator.

3. CFCL has this week also participated in the prestigious international US Fuel Cell Seminar in Texas, now an annual event with over 2,000 delegates from around the world. CFCL's Chief Technology Officer, Dr Karl Foger presented a paper to the delegates, outlining the achievements of the company in resolving complex technical challenges*.

CFCL is gaining international recognition for its elegant solutions for complex technical problems that have caused the failure of other fuel cell designs.

Ceramic Fuel Cells Ltd (CFCL) is an Australian publicly listed company (ASX code CFU) and world leader in development of energy fuel cells using natural gas. CFCL's fuel cells have significant potential to meet market demand in Europe, UK and Asia for clean, efficient, green and reliable electricity for use on site and sale back into the power grid.

With 90 skilled staff and 27 patents for its unique product design and intellectual property, CFCL is pursuing partnerships for manufacture, production and use of its fuel cells in delivering electricity in homes, offices and industry around the world.
