Ceramic Fuel Cells Limited Completes first Shipments to European partners

Ceramic Fuel Cells Limited ("CFCL"), a global leader in fuel cell development, announces that it has shipped a NetGenPlus™ unit to the United Kingdom part of its agreement with E.On UK Ltd and Gledhill Water Storage Ltd to develop micro-combined heat and power (m-CHP) products for the British market.

CFCL will next week ship a NetGenPlus™ unit to its appliance partner De Dietrich Thermique, part of the De Dietrich Remeha Group, as part of CFCL's agreements to develop commercial m-CHP products for the French and Benelux markets

These deliveries follow the December 2007 shipment of a NetGenPlus™ unit to CFCL's German partners EWE and Bruns Heitztechnik, and complete the first shipment to appliance partners in all four major territories.

The CFCL units are being integrated with the partners' high efficiency boiler units to create m-CHP products for homes across these large markets, under formal product development agreements that CFCL has signed with the appliance partners and utility customers in each market - EWE in Germany, Gaz de France in France, E.On UK Ltd in the UK and Nuon in Holland. Combined, CFCL's utility customers have more than 20 million customers across Europe.

NetGenPlus™ is CFCL's next-generation m-CHP system designed to generate electricity and provide hot water and central heating for homes and small businesses. It is powered by CFCL's advanced metal-ceramic fuel cell stack, running on widely available natural gas. The NetGenPlus™ unit can be easily connected to existing gas and electricity networks. In November 2007, the NetGenPlus™ unit was awarded CE approval, enabling the units to be deployed throughout Europe.

Commenting, Brendan Dow, Managing Director of Ceramic Fuel Cells, said:

"Today's announcement represents another significant achievement, shipping units to partners in each of our four key European territories. We are delighted by the commitment from our utility customers and appliance partners, who are investing both financing and resource into these projects. We are making excellent progress within these projects, and these shipments are the next stage in developing commercial products."

Ceramic Fuel Cells Limited is a world leader in developing solid oxide fuel cell (SOFC) technology which can provide reliable, energy efficient, high-quality, and low-emission electricity from widely available natural gas and renewable fuels. CFCL is developing SOFC products for small-scale on-site micro combined heat and power (m-CHP) and distributed generation units that co-generate electricity and heat for domestic use. CFCL is listed on the London Stock Exchange AIM market and the Australian Securities Exchange (code CFU).
